

TRENSTORE

Aluminum Trench Box

Your Safety is Our Priority TrenShore is a lightweight, versatile shoring system designed to offer simple, cost effective shoring. We have available stock ready to ship. Certified hydraulic TrenShore kits have the option to come with our patent pending TrenchLock safety system. Included in each kit are a hydraulic pump and hoses. TrenShore has many great features that traditional shoring systems don't have. These features increase safety, productivity and versatility inside the trench. Robust Components: Oversized piston rods with triple seal technology greatly reduce costly leaks and downtime. An inner tube is drawn over the mandrel for a tight fit. Easy to lift and move around on the job site: This incredibly lightweight and versatile system can be moved around the job using your bare hands. Safety Finger Guard: Oversized safety finger guards help avoid potential pinch points while keeping connections clean. Big-Block Standoff: Traditional shoring systems have high tolerance spreader-to-side rail connections. We call this a small block standoff. When dirt falls into this connection, it creates more resistance and becomes harder to use. Our big block standoff design allows dirt to fall through the connection and to keep everything running smoothly.

Category	Trenshore
Primary Uses	Light Shoring Work
Excavator Weight Range	Hand
Production Depth	5' to 12'
Panel Thickness	- 2-1/2"
Panel Heights	2', 3.5', 5', 7', 9' and 12'
Panel Lengths	6', 8', 10' and 12'

Features & Benefits

- Pin-On Extensions
- Rotating Finger Guard
- Modular Panel Design
- Over-Sleeve Protection
- Hosed Rating 5,000 PSI
- Fittings Rated 2,500 PSI
- Certified Repair Program
- Positive Triple Seal Cylinders
- Zinc Coated Clevis Pins for easy assembly
- Tested double the capacity before shipment
- Heavy duty high strength aluminum vertical rails
- Quickly assembles or disassembles for use or storing
